[!!!][TASK] Replace deprecated FlashMessage handling

Before 6.2 there have been some changes regarding the flash message handling. At first, the flash message queue object was a global static storage for all flash messages. To be able to address flash messages, the flash message service has been introduced which is official API to handle all needed queues.

Using flash messages now requires the use of this flash message service. The usage has already been removed/replaced in most parts of the core, but there are some leftovers. Also extbase provided a special layer for flash message handling which will also be removed completely.

Releases: master

Resolves: #57382

[TASK] Obsolete configurationManager injection

Remove an obsolete injection of configurationManager from extbase ControllerContext. This protected property is not used within the class anymore and was a leftover from removed old flash message handling.
