

Core - Feature # 58087

Status:	Resolved	Priority:	Should have
Author:	Markus Hölzle	Category:	Fluid
Created:	2014-04-22	Assigned To:	
Updated:	2015-01-18	Due date:	
PHP Version:			
Complexity:	easy		
Sprint Focus:			
Subject:	Fluid should support "EXT:" paths		
Description			
In extbase controllers you can set a template path:			
<pre>\$this->view->setTemplatePathAndFilename(...);</pre>			
This should support paths like "EXT:extension_key/Private/Templates/List.html"			
In the current version this throws an InvalidTemplateResourceException in TYPO3\CMS\Fluid\View\TemplateView Line 338:			
<pre>334 protected function getTemplateSource(\$actionName = NULL) { 335 \$templatePathAndFilename = \$this->getTemplatePathAndFilename(\$actionName); 336 \$templateSource = file_get_contents(\$templatePathAndFilename); 337 if (\$templateSource === FALSE) { 338 throw new Exception\InvalidTemplateResourceException("'" . \$templatePathAndFilename . "' is not a valid template resource URI.", 1257246929); 339 } 340 return \$templateSource; 341 }</pre>

Revision f0f577de - 2015-01-18 09:58 - Markus Klein

[BUGFIX] Standalone- and TemplateView must not require ucfirst file names

There's no reason to require ucfirst file names for Layouts and Partials.

This patch allows free naming of Layouts, Partials and Templates.

For best performance we really suggest to stick to UpperCamelCase though.

Can you give a use case where it's not possible to get the correct path when calling `setTemplatePathAndFilename()` ?

You could either call extension management utility to get the path to an extension or use the suggested `getFileAbsFileName()` to get it parsed automatically.

`setTemplatePathAndFilename()` says it expects an absolute path to the file.

#4 - 2014-06-20 17:57 - Markus Hölzle

Ok, I think it's always possible to call the `getAbsFileName()` manually. I just thought it would be a little simpler for developers because it would be more consistent to call always paths like "EXT:".

In my example I can set the template path for some actions via typoscript extension settings.
