PHP Version:			
Has patch:			
Complexity:			
Subject:	Implement Account Factory		

Description

Currently the typical code for creating a password-based account looks like this:

```
$roles = array(
    $this->objectFactory->create('F3\FLOW3\Security\ACL\Role', 'Participant'),
);

$salt = substr(md5(uniqid(rand(), TRUE)), 0, rand(6, 10));

$account = $this->objectFactory->create('F3\Party\Domain\Model\Account');
$account->setAccountIdentifier($accountIdentifier);
$account->setCredentialsSource(md5(md5($password) . $salt) . ',' . $salt);
$account->setAuthenticationProviderName('DefaultProvider');
$account->setRoles($roles);

$newPerson->addAccount($account);
$this->personRepository->add($newPerson);
```

It is not very intuitive and probably error prone for newbies having to write that much code
in order to create an account. Another problem is that we rely on a third developer's ability
to create a secure salt.

We therefore should provide some kind of account factory which allows for easy creation of
typical accounts:

```
$newAccount = $accountFactory->createAccountWithPassword('identifier', 'password', array('role1', 'role2'));
```

This would also be a good opportunity to move the Account model to the FLOW3 Security sub package because
it belongs more to security than to Party. The setParty() and getParty() methods should refer to a PartyInterface
rather than a specific implementation

Associated revisions

Revision 00343be8 - 2010-03-10 18:57 - Robert Lemke

[+FEATURE] FLOW3 (Security): The new AccountFactory now allows for convenient creation of a new account with username and password.
Resolves #5846
[+BUGFIX] FLOW3 (Property): Fixed the failing tests of the Property Mapper. Also replaced a few occurrences of $objectManager->get() by
$objectManager->create()
