Sprint Focus:			
Subject:	Impexp lacks support of keeping or setting new uids of lost relations		

Description

Assume following scenario:

- have translated records
- export page with all translated content
- do not export the sys_language record, because it got duplicated on import
- all sys_language_uid fields will have a lost relation to the sys_language record

On importing such export all sys_language_uid fields are set to 0
and so all translated records are on default language.

Idea to solve this: on importing there should be a list of records with corresponding uids where from other record fields a lost relation is set to. There you choose to force the old uid (import on the same instance) or to set a alternative one (import on other instance).

History

#1 - 2015-06-18 13:47 - Marc Bastian Heinrichs

- TYPO3 Version changed from 6.2 to 7

#2 - 2015-06-18 13:48 - Marc Bastian Heinrichs

- Tracker changed from Task to Feature
