Subject:	Naming of ContentElementWrapper and InlineEditableWrapper		

Description

Aske provides me a wonderfull example how to make pageproperties inlineeditable. [[
https://gist.github.com/aertmann/f9c8a33e8720f7cb21be]]

What i mentioned is, that in this case the naming of the viewhelpers doesnt realy match the usecase.

Better rename them from - to?

<neos:contentElement.wrap node="{node}"> to <neos:node.wrap node="{node}">

<neos:contentElement.editable property="title" tag="h1" /> to <neos:node.editable.property property="title" tag="h1" />

Makes sense. Could be done non-breaking by renaming to the new names and keeping the old names which just extend the new ones..
