

TYPO3.Neos - Bug # 58917

Status:	Closed	Priority:	Should have
Author:	Carsten Bleicker	Category:	
Created:	2014-05-19	Assigned To:	
Updated:	2015-03-20	Due date:	
Subject:	Pluginviews and properties		
Description			
Properties defined in node yaml not present in actions used by pluginview. Having a defined targetNode property in my plugin configuration. This value is not present if an action is defined as a pluginview.

Hi Carsten,

can you please add a short example, I can't comprehend/reproduce the issue.

#2 - 2014-05-19 13:02 - Carsten Bleicker

Sure,
this is my current yaml for my plugin.

```
'PIPEU.Factura.NodeTypes:Basket':
  superTypes: ['TYPO3.Neos:Plugin']
  ui:
    label: 'Basket'
    group: 'plugins'
    inspector:
      groups:
        settings:
          label: 'Settings'
          position: 100
    options:
      pluginViews:
        'InvoiceAction':
          label: 'Invoice View'
          controllerActions:
            'PIPEU\Factura\NodeTypes\Controller\BasketController': ['invoice']
        'DeliveryAction':
          label: 'Delivery View'
          controllerActions:
            'PIPEU\Factura\NodeTypes\Controller\BasketController': ['delivery']
        'ProviderAction':
          label: 'Provider View'
```

```
controllerActions:
  'PIPEU\Factura\NodeTypes\Controller\BasketController': ['provider']
'ControlAction':
  label: 'Control View'
  controllerActions:
    'PIPEU\Factura\NodeTypes\Controller\BasketController': ['control']
properties:
  termsAndConditionNode:
    type: reference
  ui:
    label: 'Terms and Conditions Location'
  inspector:
    group: 'settings'
```

having neos sites:

```
basket (contains basket plugin)
invoid (contains plugin view)
delivery (contains plugin view)
provider (contains plugin view)
control (contains plugin view)
```

example debug with usage of pluginviews this debug returns NULL:

```
public function controlAction(){
  \TYPO3\Flow\var_dump($this->request->getInternalArgument('__termsAndConditionNode'), __CLASS__.'#'.__LINE__, FALSE, FALSE);
}
```

without usage of pluginviews (simply remove them from the yaml and call action via get paramt) the debug is not empty and shows me the node.

#3 - 2014-06-08 21:12 - Christian Müller

You will get the PluginView node inside your PluginView. I guess we need to (also) provide the original plugin node...

#4 - 2014-12-16 11:20 - Bastian Waidelich

- Status changed from Needs Feedback to New
- Assigned To deleted (Bastian Waidelich)

Thanks for the feedback (and sorry for the missing response).

I totally agree, this would make a lot of sense. Unfortunately I can't look into this one right now so I unassign myself in case someone feels like taking over

#5 - 2015-03-20 11:20 - Dominique Feyer

- Status changed from New to Closed

Validated and Migrated to Jira: <https://jira.typo3.org/browse/NEOS-1095>
