

Core - Bug # 58952

Status:	Closed	Priority:	Should have
Author:	Chetan Thapliyal	Category:	
Created:	2014-05-20	Assigned To:	
Updated:	2014-07-10	Due date:	
TYPO3 Version:	6.2		
PHP Version:			
Complexity:			
Is Regression:	No		
Sprint Focus:			
Subject:	Inconsistent extension/package relative paths		
Description			
<p>Filesystem structure:</p> <pre>/ www system-a system-b system</pre> <p>Scenario:</p> <p>web server document root: /www/system</p> <p>system is a symlink to /www/system-a</p> <p>If caches are cleared and pages are crawled from CLI, a typo3 extension e.g. news, will have a package object cache containing "/www/system-a/typo3conf/ext/news/" as package path. The PATH_site constant in this case will be /www/system-a/ and package relative path as "typo3conf/ext/news/" (absolute path - PATH_site).</p> <p>Now if a page is accessed from browser, PATH_site constant will be /www/system/. Extension relative path in this case will be "a/typo3conf/ext/news". The extra "a/" prefix in the relative path results from the shorter PATH_site string.</p> <p>I am unable to figure out the right solution to resolve this problem. But I believe storing Typo3 relative paths in package objects should fix the issue.</p> <p>Comments and suggestions are welcome.</p>
