Subject:	Implement MVC pattern for TestRunner		
Description	The TestRunner needs a proper MVC implementation.		

History

#1 - 2007-07-04 11:18 - Robert Lemke

(In r248) Commit of some recent work while I've been offline, mainly focussing on TypoScript and the Model View Controller support.

- Framework: (Component) Added the T3P_Component_ManagerAwareInterface and functionality for conveniently getting prototypes. Fixes #58.
- Framework: (AOP) Added a method "isMethodArgument" to the AOP JoinPoint
- Framework: (AOP) A small bugfix in buildAspectContainerFromClass() which caused a PHP warning if an aspect only contained an introduction and no other advice.
- Framework: (MVC) Renamed the "GlobalDispatcher" to "Dispatcher"
- Framework: (MVC) Added a very rough router implementation to the WebRequestBuilder
- Added an .htaccess file to enable URL rewriting. Try "http://myhost/Testing" for example.
- CMS: Models, Controllers and Views now reside in their own directories instead of a common MVC directory.
- CMS: Enhanced the TypoScript "Page" object a bit and started implementing the "Template" object.
- Testing: Created a preliminary Controller for the testrunner (addresses #59). Still needs a proper implemenation and cleanup!
- TypoScript: Added a fixture and fixed an issue with using content arrays with processors.

#2 - 2007-12-11 11:17 - Robert Lemke

(In r397)

- Testing: Initial commit of the new (MVC-based) Test Runner. This is work in progress ... addresses #59
- Framework: (MVC) Renamed a method in the RequestHandlingController - makes more sense this way.
