

TYPO3.Flow - Bug # 59031

Status:	Closed	Priority:	Must have
Author:	Bastian Waidelich	Category:	Reflection
Created:	2014-05-22	Assigned To:	Bastian Waidelich
Updated:	2014-11-27	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Affected Flow version: (any)			
Subject:	Broken Reflection behavior on class-/filename mismatch		
Description			
When a PHP class is not named exactly like the corresponding file, weird things happen:			
- If only the case doesn't match (e.g. "someclass" vs "SomeClass") the class is reflected but weird side effects happen during "runtime"			
- If the class name is different (e.g. "SomeClass" vs "SomeRenamedClass") the ReflectionService currently "silently" skips the class			
Depending on what class is affected this can lead to a "Cannot redeclare class" error:			
#1355480641:			
Fatal error: Cannot redeclare class Some\Package\Domain\Model\SomeEntity in Packages/Application/Some.Package/Classes/Some/Package/Domain/Model/RenamedEntity.php on line xx

Revision b2653fda - 2014-05-22 14:47 - Christian Müller

[BUGFIX] Throw exception if case of class- and filename don't match

Mismatching class- and filename case is now detected during compiletime already and a helpful exception is thrown.
