[BUGFIX] Failing cascaded delete action of localized elements

Having a record in live workspace with an accordant localization leads to the fact that actions to the default language also have an impact to all localizations.

In a workspace, first deleting the localization, then deleting the record of the default language, ends up in actually having reverted the previous deletion of the localization.

The solution is to check for delete placeholders in `DataHandler::deleteL10nOverlayRecords()`.

Resolves: #59113

Releases: master, 6.2
