TYPO3.Fluid - Bug # 5963

Status:	Closed	**Priority:**	Won't have this time
Author:	Nathan L	**Category:**	ViewHelpers
Created:	2010-01-12	**Assigned To:**	
Updated:	2010-10-20	**Due date:**	
Has patch:			
Affected Flow version:			
Subject:	Multiple Select Form helper fails when value is Tx_Extbase_Persistence_ObjectStorage		

Description

<f:form.select multiple="true" size="4" property="dishTypes" options="{allDishTypes}" optionLabelField="name"></f:form.select>

This failed to mark selected items as selected when recipe->getDishTypes() returns a Tx_Extbase_Persistence_ObjectStorage

See the patch for the change I made to make it functional.

Basically the getOptions method converts the values away from objects.

Actually, this change I made should probably be done in getSelectedValue() but I have no time and have to catch my carpool.

History

Ok, that patch was rushed out the door. Please ignore it.

After double checking things this morning, I found it works if I add:

<f:form.select multiple="true" size="4" property="dishTypes" options="{allDishTypes}" optionLabelField="name" **optionValueField="uid"**></f:form.select>

This seems ugly to me. I shouldn't have to reference the uid should I?

If a set of objects is passed as "value" to form.select without an optionValueField, it should default to the uid or throw an exception telling the developer to add optionValueField="uid" to the template. If this seems appropriate, then I'd be happy to offer a patch.

#2 - 2010-06-18 14:49 - Sebastian Kurfuerst

- Status changed from New to Closed
- Priority changed from Should have to Won't have this time

please try again, I think actually that it automatically uses the UID if it sees instances of AbstractEntity/ValueObject.
And please re-open if needed :)

Greets,
Sebastian
