

## TYPO3.Neos - Bug # 59674

<b>Status:</b>	Closed	<b>Priority:</b>	-- undefined --
<b>Author:</b>	Carsten Bleicker	<b>Category:</b>	
<b>Created:</b>	2014-06-19	<b>Assigned To:</b>	
<b>Updated:</b>	2015-03-20	<b>Due date:</b>	
<b>Subject:</b>	Production Mode does not resolve current domain		
<b>Description</b>	<p>Having a site without any domain records the domain of first call is used for any other domain: So this results here in this, f.e.:</p> <pre>&lt;meta property="og:image" content="http://pipeu.local/_Resources/Static/Packages/PIPEU.Site/Media/OpenGraphLogo.png"/&gt;</pre> <p>first call was from local second call with other domainname f.e. pipeu.whatever.de. pipeu.whatever.de is not used in this case. any absolute link has local domain.</p>

- Status changed from New to Needs Feedback

That is not an issue IMHO. If your production site is available via multiple domains (which is not a good idea) you should prime the link cache by calling all links via a crawler.

#### #2 - 2014-06-20 15:50 - Carsten Bleicker

So what is the practice here?

1. Having same db (holding domain record) for production and develop context?
2. Or using different dbs, 1 for production context and 2 for dev context. both holding different domains?

In case of 1 db for any context:

Is in dev context the domain in use?

What is your practice here?

#### #3 - 2014-06-20 17:13 - Henjo Hoeksma

- Priority changed from Should have to -- undefined --

Development and Production would not be on the same server ideally I think. So you will have 2 different databases, one for production and one for development.

#### #4 - 2014-07-01 15:16 - Christian Müller

Even if you have, you would definitely want to clear your caches on rollout and make your vhost settings so that the dev domain is not accessible on the live server.

No feedback since 9 month, I close this issue.

Feel free to reopen it on [jira.typo3.org](http://jira.typo3.org), if required.

I am working on dev.local.

Client views dev state by dev.foo.de

This should also end up in broken uri:

```
<meta property="og:image" content="http://dev.local/_Resources/Static/Packages/PIPEU.Site/Media/OpenGraphLogo.png"/>
```

and not in

```
<meta property="og:image" content="http://dev.foo.de/_Resources/Static/Packages/PIPEU.Site/Media/OpenGraphLogo.png"/>
```

correct?
