<b>Subject:</b>	Package loading order is corrupted by faulty patch #59147		
<b>Description</b>	<p>The path saved to packagePathStack contains the package name, but is compared to the storage folder only.</p> <p>Moreover the EM fails upon removing extensions, as we do not persist the packagePathStack information, we would need for that case. :-(</p>

#### Revision 143c2744 - 2014-06-24 03:15 - Markus Klein

Revert "[BUGFIX] Fix loading order for extensions"

This reverts commit 49b53d491e43f3ad7a4c30dc23e208eb8db04199

The patch has two flaws: \* Easy: packagePathStack also includes package folder which is incompatible to the excludedPaths search \* Nightmare: Upon uninstalling extensions the PackageManager fails due to missing packagePathStack information

Is there a fair chance this will be solved within the coming weeks? I can live fine without the package-stuff (and I think most TYPO3 users would too), as long as it is made to work with TYPO3 extensions.

As it is right now, it is a nightmare to reliably use the Extension Manager - and it has been like that ever since October 2013, when the package-stuff was merged in to core :-)

PS: Is there an issue about printing the loading order within the Extension Manager (like there was in previous Extension Managers)?

@Kasper, are you talking about #59147?

Please read my comments there.

Please do not post to this issue here, it is just here to document the revert of the original patch.
