Updated:	2010-10-20	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Subject:	Implicitly call __toString method if action result is an object		
Description			
If an action method returns an object, the ActionController should check if a __toString method exists and if so call it and append its result to the response content.			

Associated revisions

Revision bc5c763a - 2010-01-13 13:50 - Robert Lemke

[+FEATURE] FLOW3 (MVC): If the result of an action method is an object providing a __toString() method, this method will be called by the ActionController and its result will be added to the response content. Resolves #5995

[+FEATURE] FLOW3 (MVC): The routes property @controller now allows the use of namespace separators for referring to classes in file / class structure below "Controllers". Resolves #5998

[~TASK] FLOW3 (Documentation): Fixed a few typos in the AOP documentation.
