| Subject: | ObjectAccessorNode::evaluate calls ObjectAccessor even if variable is not an object or array | | |
| Description | | | |
| ObjectAccessorNode::evaluate calls ObjectAccessor even if variable is not an object or array. | | | |

Associated revisions

Revision 60975395 - 2010-01-13 16:36 - Robert Lemke

[+BUGFIX] Fluid (Core): Added safeguard in ObjectAccessorNode::evaluate which checks for object or array before passing a variable to ObjectAccess::getPropertyPath(). Resolves #6003

[~TASK] Fluid (View): TemplateView::expandGenericPathPattern() now uses the proper API functions of the Request object to determine package keys and controller name instead trying to parse them from the controller object name. Relates to #5998
