PHP Version:			
Has patch:	No		
Complexity:	easy		
Subject:	LockManager's LockHoldingStackPage should be configurable		

Description

In the LockManager's current implementation, the file to be displayed when Flow is locked sadly is hard-coded on line 101:

    readfile(FLOW_PATH_FLOW . 'Resources/Private/Core/LockHoldingStackPage.html');

This should be configurable and could be implemented like so in TYPO3.Flow's Settings.yaml:

    TYPO3:
     Flow:
      core:
       lockHoldingStackPage: 'resource://TYPO3.Flow/Private/Core/LockHoldingStackPage.html'

History

I think it would be nice if that page could be configured like the other errorpages via the renderingGroups configuration.

However, there are a few issues with that:

1.) In the essential bootstrap, initializeErrorHandling would have to be put before initializeLockManager - should be no problem, no?

2.) Every request to a locked site would also create an exception log entry (including dump) - is that feasible?

3.) The usage of 'resource://' will not be easily possible, as the resource management and resource wrapper is initialized much later than the lockmanager - this is a major issue against using renderingGroups

I'll push a change that adds the simple configuration setting as above for the time being.
