| <b>Sprint Focus:</b>   |  |                     |              |
| <b>Subject:</b>  | PageTree cannot select/expand hidden nodes |                     |              |
| <b>Description</b>   |  |                     |              |
| <p>TYPO3.Backend.NavigationContainer.PageTree.select(64) does not select the correct page, but tries to determine the correct node levels, fakes the local node states and reloads the page tree. One thing that might not be considered there is the fact that pages are represented in hex-values with a leading "p", thus the integer "64" with be converted to "p40" as node id.</p> <p>To overcome this scenario and enable custom handling there, a new generic method is introduced:</p> <p>TYPO3.Backend.NavigationContainer.PageTree.invokePageld(pageld, callback, allResults);</p> <p>The methods "selectPageld" and "expandPageld" show how this is actually used.</p> |  |                     |              |
