

Core - Bug # 60726

Status:	Resolved	Priority:	Should have
Author:	Stefan Froemken	Category:	Fluid
Created:	2014-08-01	Assigned To:	
Updated:	2014-09-20	Due date:	
TYPO3 Version:	6.2		
PHP Version:	5.4		
Complexity:	easy		
Is Regression:	No		
Sprint Focus:			
Subject:	__identity field will not be rendered if of type @lazy		
Description			
<p>Hello Core-Team,</p> <p>I have a field like that one in my fluid-template:</p> <pre><f:form.textfield class="powermail_input" placeholder="ss:mm" id="timeBegin" property="eventTime.timeBegin" /></pre> <p>To prevent it from validation I have added the @lazy annotation in domain model. In renderHiddenIdentityField method you have something like:</p> <pre>if (!is_object(\$object)) !(\$object instanceof \TYPO3\CMS\Extbase\DomainObject\AbstractDomainObject) (\$object->_isNew() && !\$object->_isClone())) { return ""; }</pre> <p>But \TYPO3\CMS\Extbase\Persistence\Generic\LazyLoadingProxy isn't any type of them, so my required __identity field will not be rendered in template.</p> <p>Stefan</p>

Revision 66d5ac3a - 2014-09-20 17:13 - Stefan Froemken

[BUGFIX] add _loadRealInstance in f:form ViewHelper

If you edit a form containing subproperties of your domain model, f:form VH will add some hidden fields to identify your related domain models (__identity). But in case of @lazy annotations, these fields will not be rendered because of a missing _loadRealInstance call in AbstractFormViewHelper object.

Releases 6.3, 6.2

Resolves: #60726

| *To prevend it from validation I have added the @lazy annotation in domain model.*

Is this sentence correct? If so, @lazy is definately not meant to be used to circumvent validation.

#6 - 2014-08-14 08:55 - Stefan Froemken

I know it is for loading domain models when needed. But in case of MM-Tables a @lazy annotation is the best solution to stop validation over nearly ALL mmm-records (tested duration: 17 seconds).
