

Core - Bug # 60867

Status:	Closed	Priority:	Should have
Author:	Stefanos Karasavvidis	Category:	
Created:	2014-08-09	Assigned To:	
Updated:	2014-12-11	Due date:	
TYPO3 Version:	6.2		
PHP Version:	5.5		
Complexity:			
Is Regression:	No		
Sprint Focus:			
Subject:	simulatestatic + tt_news + config.simulateStaticDocuments_pEnc broken in 6.2		
Description			
<p>I've upgraded from 4.7 to 6.2</p> <p>In 4.7 I used simulatestaticdocuments with simulateStaticDocuments_pEnc_onlyP in order to get links to tt_news items (list and single) of the form</p> <p>PAGEID+HASH.html</p> <p>For example http://hostname/40+M5bcbc2ad9be.html</p> <p>In 6.2, I installed the separate simulatestatic 2.0 from TER and the links in tt_news LIST are still created like this, but they to not work anymore. I get either a 404 error (upgraded 4.7 installation) or a "no news_id given" (blank install). I also tried on a completely new 6.2 installation to make sure that my old site conf does not interferer.</p> <p>I couldn't find any special new configuration options. This seems related to #36025 and maybe #56491</p> <p>My config is</p> <pre>config.simulateStaticDocuments = 1 config.simulateStaticDocuments_noTypeIfNoTitle = 1 config.simulateStaticDocuments_pEnc = md5 config.simulateStaticDocuments_pEnc_onlyP = tx_ttnews[pointer], tx_ttnews[tt_news],tx_ttnews[backPid],tx_ttnews[pS],tx_ttnews[pL],tx_ttnews[arc], tt_news,cHash, tx_ttnews[backPid], tx_ttnews[pS], tx_ttnews[pL], tx_ttnews[cat], tx_ttnews[pointer], tx_ttnews[swords]</pre> <p>I have PHP 5.5</p>

- Status changed from New to Needs Feedback

Hi!

simulatestatic was removed from Core with 6.0 already. The sysext was moved to TER and the Core got a hook such that this old extension would still

work for a while.

With 6.2 this hook (which was only introduced for the deprecation grace period) got removed again.

As far as I know, the simulatestatic extension is not maintained anymore and is therefore incompatible with 6.2.

If you still need this old outdated way of generating URLs, please adopt the simulatestatic extension to use the same hooks that other url-rewriting extension use. (e.g. realurl, cooluri)

The extension is not maintained by Core contributors anymore.
