In my case the problem is that 'document.domain' in the iFrames is empty (not in the parent frame). This makes the browser fail.

In PreviewController->indexAction the "backendDomain" is evaluated like this:

```
$this->view->assign('backendDomain', GeneralUtility::getIndpEnv('TYPO3_HOST_ONLY'));
```

In TypoScriptFrontendControllerHook->hook_eofe it is done like this:

```
'backendDomain.' => array('value' => $GLOBALS['BE_USER']->getSessionData('workspaces.backend_domain'))
```

In my case, the backend_domain from the session data is empty. When I change it to

```
'backendDomain.' => array('value' => \TYPO3\CMS\Core\Utility\GeneralUtility::getIndpEnv('TYPO3_HOST_ONLY'))
```

it works. I don't understand why in the latter case sessionData is used and in the first case the environment variables.

#2 - 2014-09-22 17:06 - Oliver Hader

- Status changed from New to Accepted

- Parent task set to #60008

I agree, the visual components look "ugly" and do not respond to changed screen sizes..

#3 - 2014-09-22 17:59 - David Benjamin

- File *WorkspaceError5.jpg* added

I applied the patches in from issue #61699. It fixed issue #61374 but not this one.

I have attached a screen shot.

#4 - 2015-01-23 11:33 - Mathias Schreiber

- Target version set to 7.5
