<b>Subject:</b>	Enhance CreateDirectoriesTask to create directories inside the new releasedirectory		
<b>Description</b>			
<p>Right now there is no chance to create new directories with TYPO3\Surf\Task\Generic\CreateDirectoriesTask from your build script since the tasks merges the deployment path and your folder path. In your build script there is no chance to get the current release identifier to extend your folder path. So it would be cool if there is an possibility to use that Core-Task to create new folders in your release path.</p>
