[BUGFIX] Escape element ID before used in jQuery selector

General information: to use any of the meta-characters as a literal part of a jQuery selector, it must be escaped with two backslashes: <http://api.jquery.com/category/selectors/>

Using IRRE (TCA type "inline") in Flexforms, TYPO3 may generate HTML elements with IDs containing dots. Example:

```
id="data-104-tt_content-182-pi_flexform---data---fileSelection  
---IDEF---settings.fileSelection.files---vDEF_records"
```

If you set "useSortable" and "enableControls.dragdrop" to 1 for an element in your Flexform configuration, inline.createDragAndDropSorting(objectId) will get called for that element. This objectId has to be escaped to be used as a literal part of a jQuery selector later in this function. Otherwise the drag-and-drop functionality will fail.
