Sprint Focus:			
Subject:	Bring back class aliases to prevent Fatal Error		
Description	<p>In an early state of the bootstrap all ext_autoload files are processed. During the cleanup of class aliases ext_Mgm and t3lib_div are removed. This causes in instances without enabled sysext:compatibility6 a Fatal Error, that results in the meanwhile well known Exception 'could not acquire lock file.'. In order to mitigate this situation, we will bring back those two class aliases and will keep them in the core for the time being.</p> <p>These two classes are exceptions and there shouldn't be added more than that without very good reasons.</p>

[TASK] Bring back t3lib_extMgm class alias

t3lib_extMgm::extPath() is used in ext_autoload.php of lots of third party extensions. Removing this alias lets the core fatal, resulting in a stalled lock file in early bootstrap. This gives quite some hassle. To mitigate, t3lib_extMgm class alias is exceptionally added again.

Resolves: #62852

Releases: master
