

TYPO3.Flow - Feature # 64842

Status:	New	Priority:	Could have
Author:	Hardik Satasiya	Category:	
Created:	2015-02-04	Assigned To:	
Updated:	2015-02-04	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Subject:	Validation of Property should also happen before Property Mapping.		
Description			
Problem :			
I have relation from my model to user many to one so when i try to insert record and if i choose staff it works like charm but if i put it blank it throws me error during property mapping.			
it seems its mapping argument before validating it.			
As in post arguments :			
momentForm[staff] = <blank> <-- throws error NULL given insted of ExtendedUser			
If i remove "momentForm[staff]" then it validates the property properly.			
But i can not remove "momentForm[staff]" from post if some one is not selecting anything from select box.			
validation after :			
initialize*Action - for manual property mapping			
validation before :			
and before automatic property mapping			
Scenario :			
template :			
<f:form action="addMoment" method="post" objectName="momentForm" >			
...			
<f:form.select property="staff" prependOptionLabel="- select staff -" options="{staff}" optionLabelField="name" />			
...			
model :			
@/** * @var <package-name>\Domain\Model\ExtendedUser * @Flow\Validate(type="NotEmpty") * @ORM\ManyToOne *			
ORM\Column(options={"comment"= "Referance to User Account"})			
*/			
protected \$staff;			
controller :			
@			
/** * add moment Action * * @param <package-name>\Domain\Model<model-name> \$momentForm * return void			
*/			
public function addMomentAction(\$momentForm) {
