Updated:	2010-10-20	**Due date:**	
PHP Version:			
Has patch:			
Complexity:			
Subject:	Move "Validation" to its own subpackage		

Description

Currently the "Validation" features reside in the "Security" subpackage of "Framework". As discussed, this should be moved to its own subpackage:

Framework/
  Classes/
    Validation/
      T3_Framework_Validation_ValidatorInterface.php
      ...
      Filter/
        T3_Framework_Validation_FilterInterface.php

"Filter" may become a subpart of "Validation" ("FilterInterface" doesn't exist yet).

Associated revisions

Revision cf097610 - 2008-04-16 17:36 - Andreas Förthner

This is all work in progress, but a big part of the Validation/Property Package is already finished:

  - Implemented the basic Validation Framework. This fixes #65, #67, #68, #70
  - Implemented some base validators. This fixes #71
  - Implemented a basic Framwework for PropertyEditors
