Complexity:	
Affected Flow version:	
Subject:	Fully support regular expressions for method names in pointcut expressions
Description	

Currently only a limited set of regular expressions can be used in a pointcut expression, for example:

    method(MyClassName->.*Action())

However, parentheses are not supported yet, but they would be quite useful for defining policy resources:

    method(MyClassName->(new|edit|create|delete|update)Action())
