

Extension Builder - Task # 65547

Status:	Needs Feedback	Priority:	Should have
Author:	Simon Schaufelberger	Category:	Code Creation
Created:	2015-03-05	Assigned To:	
Updated:	2015-03-16	Due date:	
Subject:	Generate Fluid templates with fluid namespaces		
Description			
See: #27119 and https://fluidtypo3.org/documentation/templating-manual/templating/creating-templates/page-template.html			
example:			
<pre><div xmlns="http://www.w3.org/1999/xhtml" lang="en" xmlns:f="http://typo3.org/ns/TYPO3/Fluid/ViewHelpers"> <f:layout name="Default" /> <f:section name="main"> ... </f:section> </div></pre>			
I'm just not sure if you should use http://typo3.org/ns/typo3/fluid/viewhelpers or http://typo3.org/ns/TYPO3/Fluid/ViewHelpers

related to TYPO3.Fluid - Feature # 27119: Declare namespaces in XML tag		Resolved	2011-05-29

History

#1 - 2015-03-05 19:33 - Simon Schaufelberger

this is maybe good for the documentation: <http://insight.helhum.io/post/85031122475/xml-schema-auto-completion-in-phpstorm>

maybe also add the location like this:

```
f:schemaLocation="https://fluidtypo3.org/schemas/fluid-master.xsd"
```

#2 - 2015-03-14 23:07 - Nico de Haen

- Status changed from New to Accepted

#3 - 2015-03-16 03:50 - Nico de Haen

- Status changed from Accepted to Needs Feedback

As long as the namespace url has no real target it doesn't really makes sense to me to add it to the generated templates.

Or is there an official URI now?
