<b>Updated:</b>	2010-10-20	<b>Due date:</b>	
<b>Sprint:</b>			
<b>PHP Version:</b>			
<b>Has patch:</b>			
<b>Complexity:</b>			
<b>Subject:</b>	Make global objects, that should be available in runtime evaluations, configurable		
<b>Description</b>	<p>At the moment only <code>current.party</code> can be referenced within a pointcut expression. There should be a configuration setting where you can register other objects under the "current." scope. The setting must have an unique name like "party" and a PHP statement, that retrieves this object like <code>"\$objectManager-&gt;getObject('foo')-&gt;getSomething();"</code></p>		

### Associated revisions

#### Revision 23ce4758 - 2010-06-23 14:31 - Andreas Förthner

- [+TASK] FLOW3 (Object): Added session scope related methods to the object manager and interface.
- [+FEATURE] FLOW3 (AOP): Added a matches operator as a new possibility for runtime evaluations.
- [+FEATURE] FLOW3 (AOP): Global objects available in runtime evaluations can now be configured in the settings. Resolves #6598.
- [+FEATURE] FLOW3 (Security): Implemented query rewriting according to the security policy. Relates to #5659, Resolves #6604.

### History

#### #1 - 2010-06-23 14:35 - Andreas Förthner

- Status changed from *New* to *Resolved*
- % Done changed from 0 to 100

Applied in changeset r4613.

#### #2 - 2010-06-24 12:51 - Andreas Förthner

- Status changed from *Resolved* to *Accepted*

We should simply use object names and fetch the objects from the object manager. No evil eval anymore.

#### #3 - 2010-07-09 14:18 - Robert Lemke

- Status changed from *Accepted* to *Resolved*
- Target version set to 1.0 alpha 10
