Sprint Focus:			
Subject:	Tell FAL driver that we will fetch 40 files now		
Description			
<p>The FileList shows 40 files at once, but the FAL driver only gets requests for a single file at a time.</p> <p>The driver does not have the chance to do batch requests to its remote storage to improve loading times.</p> <p>If the file list would do a "pre-flight request" to the driver, stating that it will fetch that array of file identifiers soon, then the driver could react on that and do a batch request, caching this data internally.</p>
