

## TYPO3.Fluid - Bug # 6691

<b>Status:</b>	Resolved	<b>Priority:</b>	Could have
<b>Author:</b>	Michael Sauter	<b>Category:</b>	
<b>Created:</b>	2010-03-04	<b>Assigned To:</b>	
<b>Updated:</b>	2010-10-20	<b>Due date:</b>	
<b>Has patch:</b>			
<b>Affected Flow version:</b>			
<b>Subject:</b>	Backslash in Textfield ViewHelper		
<b>Description</b>			
This:			
<code>&lt;f:form.textfield name="somename" value="F3\" size="60" /&gt;</code>			
results in the following HTML code:			
<code>&lt;input type="text" name="somename" value="F3" size="\" /&gt;</code>			
I would expect the following (as is the case if you write plain HTML):			
<code>&lt;input type="text" name="somename" value="F3\" size="60" /&gt;</code>			

### History

#### #1 - 2010-03-04 10:36 - Michael Sauter

Ah, sorry for the wrong less then / greater then symbols ... should be < and > of course.

#### #2 - 2010-04-29 01:03 - Christian Müller

Slashing the slash should help so ...F3\" should work. So this is a no bug for me.

This doesn't work in alpha8 for me.

But, even if it would work, I would still consider this a bug. From a non-technical point of view, the Fluid language is just XML. So IMHO it should behave like HTML/XML, and not like something that is parsed by PHP. If it's impossible to accomplish that, escaping would be fine for me as long as it is stated somewhere that I have to escape backslashes.

Sorry for the delay. Well it is all about the parser, it allows a \" inside a value string, so that won't work. Fortunately ' (single-quote) is also allowed in view-helper syntax, so try if that works for you:

```
<f:form.textfield name="somename" value='F3\' size="60" />
```

**#5 - 2010-06-24 20:11 - Sebastian Kurfuerst**

- Status changed from New to Needs Feedback
- Priority changed from Should have to Could have

**#6 - 2010-06-28 14:53 - Michael Sauter**

Thanks for the hint, single-quote works.

**#7 - 2010-07-02 00:10 - Christian Müller**

- Status changed from Needs Feedback to Resolved

nothing more to do.
