Subject:	dbal admin_get_tables() returns additional DBMS specific info for DEFAULT

Description

MySQL:

    default ''

DBAL (PostgreSQL):

    default '\'\'::character varying'

This is wrong in two ways:

1) The correct value to show would be default ''::character varying
2) The ::character varying part is PostgreSQL specific/internal

[TASK] dbal: convert DBMS specific key/default/extra values to MySQL SQL

Allow DBMS specific transformations of field information to MySQL SQL
dialect. Provide the database compare in the install tool with more
details about the current database schema to avoid changes that can not
be implemented due to syntax differences.
