<b>PHP Version:</b>			
<b>Has patch:</b>			
<b>Complexity:</b>			
<b>Subject:</b>	Implement a Validator Resolver		
<b>Description</b>			
<p>As a convenience function (eg. in the Property Mapper) we need a resolver which is able to find a validator for the given object. The interface of T3_Framework_Validation_ValidatorResolver could be as simple as:</p>			
<pre>public function resolveValidatorName(\$targetObject); public function resolveValidator(\$targetObject);</pre>			
<p>the first method returns the component name (or NULL if no validator could be found) and the second method returns an actual validator object.</p>			

### Associated revisions

**Revision cf097610 - 2008-04-16 17:36 - Andreas Förthner**

This is all work in progress, but a big part of the Validation/Property Package is already finished:

- Implemented the basic Validation Framework. This fixes #65, #67, #68, #70
- Implemented some base validators. This fixes #71
- Implemented a basic Framwework for PropertyEditors
