<b>Updated:</b>	2010-10-20	<b>Due date:</b>	
<b>PHP Version:</b>			
<b>Has patch:</b>			
<b>Complexity:</b>			
<b>Subject:</b>	Add Validators for generic base types		
<b>Description</b>			
The framework should provide a few validators which can handle basic types such as:			
<ul style="list-style-type: none"><li>- Text (ie. text without control characters. Question is if HTML would be a valid text?)</li><li>- Float</li><li>- Number</li><li>- NumberRange</li><li>- Integer</li><li>- EmailAddress</li><li>- NotEmpty</li><li>- RegularExpression</li></ul>			
(Maybe create tickets for each of them)			
Always make sure to be clear about the difference between filter and validator.			

### Associated revisions

---

#### Revision cf097610 - 2008-04-16 17:36 - Andreas Förthner

This is all work in progress, but a big part of the Validation/Property Package is already finished:

- Implemented the basic Validation Framework. This fixes #65, #67, #68, #70
- Implemented some base validators. This fixes #71
- Implemented a basic Framwework for PropertyEditors

### History

---

#### #1 - 2008-01-08 19:56 - Malte Jansen

This one should be missed:

- Alphanumeric

Pretty useful for hashes or other identifications.

---

Perhaps some of the validators are pretty useful for a direct check of Arguments...

e.g.

```
$this->arguments->addNewArgument('packageKey', 'alphanumeric');
```
