PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	Catch fatal error message when running PHP < 5.3		
Description			
<p>I thought that I have PHP 5.3 installed but got a fatal error message instead of FLOW3 welcome message. Finally I realized that I'm still running PHP 5.2 but I didn't get a warning message from FLOW3 system.</p> <p>The <i>Web/index.php</i> file should be compatible to PHP versions < 5.3 and if the server is running a smaller version than 5.3 it should print an error message and the setup guide from Getting Started tutorial (or a link to it).</p>

Hi Karsten,

```
Warning: require(__DIR__../Packages/Framework/FLOW3/Scripts/FLOW3.php) [function.require]: failed to open stream: No such file or directory in [...]index.php on line 31
```

```
Fatal error: require() [function.require]: Failed opening required '__DIR__../Packages/Framework/FLOW3/Scripts/FLOW3.php' (include_path='.:usr/share/php:usr/share/pear') in [...]index.php on line 31
```

(on FLOW3-1.0.0-alpha8-build24)

The magic constant *DIR* came with PHP 5.3 and is unknown smaller PHP versions.
