| <b>Subject:</b>  | Move context configuration defaults to package |                     |               |
| <b>Description</b>   |  |                     |               |
| <p>Currently we deliver certain configuration defaults for the Testing and Production context in the global Configuration/ directories. This is annoying, because it's really defaults of the package, not of the distribution and whenever the options / defaults change in FLOW3, everybody needs to manually update the defaults in their distribution's Configuration/ directory (such as in the TYPO3 distribution).</p> <p>Additionally it gives a bad user experience: The global Configuration/ directory is meant for configuration options added by the user. These directories should actually be empty with a fresh checked out FLOW3 or TYPO3 distribution.</p> <p>Solution: Move the defaults into the package's Configuration directory and add support for that into the configuration management.</p> |  |                     |               |

### Associated revisions

#### Revision 8fe75901 - 2010-04-28 15:04 - Robert Lemke

[+FEATURE] FLOW3 (Configuration): The ConfigurationManager now supports context directories in the FLOW3 package's Configuration directory. This allows us to deliver the FLOW3 distribution (and other distributions) with a virtually empty global Configuration directory. Resolves #7479

[~TASK] FLOW3 Base Distribution: Removed the global context configurations.

#### Revision 1120935c - 2010-04-28 15:05 - Robert Lemke

[+FEATURE] FLOW3 (Configuration): The ConfigurationManager now supports context directories in the FLOW3 package's Configuration directory. This allows us to deliver the FLOW3 distribution (and other distributions) with a virtually empty global Configuration directory. Resolves #7479

[~TASK] FLOW3 Base Distribution: Removed the global context configurations.

### History

#### #1 - 2010-04-28 12:20 - Robert Lemke

- Status changed from New to Accepted
- Assigned To set to Robert Lemke
- Target version set to 1.0 alpha 9

#### #2 - 2010-04-28 14:42 - Robert Lemke

For the time being (until we need something more sophisticated), this feature is now implemented as follows:

- Only the FLOW3 package can have context directories in its Configuration dir
- Currently the Configuration Manager only looks for **settings** in that additional directory - other configuration types are ignored

**#3 - 2010-04-28 16:00 - Robert Lemke**

- *Status changed from Accepted to Resolved*

- *% Done changed from 0 to 100*

Applied in changeset r4230.
