Tags:			
Subject:	form.noFunctionButton		

Description

I really think Fluid needs a "no function" button

http://w3schools.com/tags/tag_button.asp

This button could be used a long with ex. a Javascript Framework, to customize a function when the button is clicked.

Ex:

HTML:
<form>
<input type="button" name="showInfo" ud="showInfo" />
</form>

JS (ExtJS):
Ext.get('showInfo').on('click', function() {
  Ext.get('infoBox').fadeIn();
});

If accepted I will take the time to write the viewhelper

Wrong link, would have pointed to

http://w3schools.com/tags/tag_input.asp

showing the different types for ex. input field that might be interesting to have viewhelpers for?!

- Status changed from New to Needs Feedback

We were discussing about this one and asked ourselfs, why would you need a view helper for this?

Mentioned in the description:

In order to apply JS functionality to a button inside a form, without submitting the form or add nasty "return false" to a submit button

#4 - 2010-07-06 14:15 - Christian Müller

I think you just need to write plain html in your template to get what you want:

    <input type="button" name="showInfo" id="showInfo" />

Should be no problem.
