TYPO3.Kickstart - Bug # 7676

Status:	Resolved	**Priority:**	Must have
Author:	Soren Malling	**Category:**	
Created:	2010-05-05	**Assigned To:**	Karsten Dambekalns
Updated:	2010-10-20	**Due date:**	
Affected Flow version:			
Subject:	repository kickstarter create invalid PHP		

Description

Using FLOW3 1.0.0 Alpha 8

    ./flow3 kickstart PhotoDatabase image

created the following PHP, which is invalid due to missing {}

    class ImageRepository extends \F3\FLOW3\Persistence\Repository

It should be

    class ImageRepository extends \F3\FLOW3\Persistence\Repository {

    }

Sorry if this is fixed in SVN, but couldn't find any other issue on this one

I think this is a problem with Fluid, see bug #6779.

Must disagree :) the domain model and controller are created with no errors and the template looked 99% the same when I had a look at them yesterday

I know, they're 99% the same. But there's 1% difference :)

Quick fix: Open up Packages/Framework/Kickstart/Resources/Private/Generator/Repository/RepositoryTemplate.php.tmpl and add a comment in between the curly brackets. This will result in a correct PHP file.
