

TYPO3.Kickstart - Bug # 7726

Status:	Resolved	Priority:	Should have
Author:	Soren Malling	Category:	
Created:	2010-05-09	Assigned To:	Karsten Dambekalns
Updated:	2010-10-20	Due date:	
Affected Flow version:			
Subject:	model kickstarter doesn't accept comma seperated model names		
Description			
TurtleJoe:flow3 sorenmallings\$./flow3 kickstart controller PhotoDatabase Album,Photo + .../Packages/Application/PhotoDatabase/Classes/Controller/AlbumController.php + .../Templates/Album/index.html + .../Packages/Application/PhotoDatabase/Classes/Controller/PhotoController.php + .../Templates/Photo/index.html TurtleJoe:flow3 sorenmallings\$./flow3 kickstart model PhotoDatabase Album,Photo + .../Packages/Application/PhotoDatabase/Classes/Domain/Model/Album,Photo.php			
Using comma seperated value when creating controller works perfectly, but using comma seperated values in model creates a file name [commaseperated values].php (as seen above)			

History

#1 - 2010-05-09 17:29 - Soren Malling

The same issue is present when creating repositories

#2 - 2010-10-11 13:47 - Karsten Dambekalns

- Status changed from New to Resolved
- Assigned To set to Karsten Dambekalns

Well, the documentation doesn't say this is supposed to work, and how could it? You would probably never want to have the same properties for multiple models. The Getting Started tutorial says:

The syntax is @./flow3 kickstart model PackageKey ModelName propertyName:type propertyName:type ...@

Thus having one command per model makes sense, no? For controllers specifying multiple names at once is possible, since they need no further input to be created.
