Complexity:			
Subject:	API method for retrieving the original filename of recently imported resources		
Description			
<p>When a file is uploaded to FLOW3, there's currently no viable way to get knowledge of the original filename - all you get is a resource object.</p> <p>It would be helpful if the Resource Manager had an API function for retrieving the imported resources (of the current script run) and get some further information about the import.</p>			

Associated revisions

Revision 00e63862 - 2010-06-07 14:54 - Robert Lemke

[+FEATURE] FLOW3 (Resource): The resource:// stream wrapper now also supports persistent resource - just specify the resource hash to access one. Resolves #8082

[+FEATURE] FLOW3 (Resource): The Resource Manager now provides an API method for getting more information about recently imported or uploaded resources. Resolves #8088

[+FEATURE] FLOW3 (Resource): Resource objects can now be converted to a string. Its __toString() method returns the resource's sha1 hash.

[+TASK] FLOW3 (Documentation): Updated the Resource Management section in the FLOW3 manual.

[~TASK] FLOW3 (Error): The debugger now doesn't filter Resource classes anymore.
