

TYPO3.Neos - Task # 8442

Status:	Resolved	Priority:	Should have
Author:	Sebastian Kurfuerst	Category:	
Created:	2010-06-22	Assigned To:	Sebastian Kurfuerst
Updated:	2012-08-31	Due date:	
Subject:	Fluid ViewHelper <f:render> should support same-template section rendering		
Description			
<p>For menu generation, we to change the way sections are rendered in Fluid, so the following should be possible inside a template:</p> <pre><f:render section="itemList" arguments="{items: items}" /> <f:section name="itemList"> <f:for each="{items}" as="item"> <f:link.action package="TYPO3" controller="Frontend\Page" action="show" arguments="{page: '{item.nodePath}'}">{item.label}</f:link.action> <f:if condition="{item.subltems}"> <f:render section="itemList" arguments="{items: item.subltems}" /> </f:if> </f:for> </f:section></pre>			
<p>As this part is somehow hacky anyways inside TemplateView, it needs to be cleaned up.</p>			
<p>The following cases need to be tested separately:</p> <ul style="list-style-type: none">- <f:render section="foo" /> in a Layout<ul style="list-style-type: none">- should render section in TEMPLATE- should use variables of TEMPLATE- <f:render partial="foo" /> (no matter where)<ul style="list-style-type: none">- should render the given partial EVERYWHERE- arguments need to be passed explicitly- <f:render section="foo" /> in a Partial<ul style="list-style-type: none">- should use section in same PARTIAL- arguments need to be passed explicitly- <f:render section="foo" /> in a Template<ul style="list-style-type: none">- should use section in same TEMPLATE- arguments need to be passed explicitly- <f:render partial="foo" section="bla"/><ul style="list-style-type: none">- should use section of given partial- arguments need to be passed explicitly
