Updated:	2010-10-20	**Due date:**	
Has patch:			
Affected Flow version:			
Subject:	CheckBoxViewHelper hidden value creates extra data when using multi-valued field names		

Description

In fluid 1.2.0

When creating multiple edit grids (in tables for examples) I use the following syntax to retrieve an array of values to update in my form :

```
<ul>
  <f:for each="{articles}" as="article">
   <li>
    <f:form.checkbox name="articles[]" value="{article.uid}" />
   </li>
  </f:for>
</ul>
```

But the new hidden field created to manage empty values actually adds a new entry in the articles array I receive.

This is a regression form previous versions of fluid.

The actual hidden field solution is only valid if uses with mono-valued fields.
