Status:	Closed	Priority:	Should have

Subject:	Exception on wrong processing instruction misleading		
Description			
When defining a processing instruction incorrectly like			
<pre>foo << wrap('foo', 'bar')</pre>			
you get the exception			
<pre>#1182705997: Invalid processing instruction "wrap('foo', 'bar')"</pre>			
This is misleading, because it makes you think the wrap is wrong, but it's the index missing in this case.
