Now that routing works even without routes (it does, right?) this should be a lot easier...

uhm.. no. Do you mean

`http://localhost?@package=MyPackage&@controller=MyController&@action=myAction`

?

This works, but it still requires an (empty) route. But I think it would be better to have:

`http://localhost/index.php/MyPackage/MyController/myAction`

If I'm right, we would "just" need to use "`http://localhost/index.php/`" instead of "`http://localhost/`" as Base URI if `mod_rewrite` wasn't available.

Almost - only for links, as otherwise paths to static resources would be wrong...

Applied in changeset r3234.
