Subject:	Clean up SetupController and its resources		
Description	<p>The Backend\SetupController is currently a real mess. FLOW3's validation is neglected, the Fluid template uses inline styles (well, it uses the "error" layout to display the setup screen) and so on. Also the import functionality should be extracted to its own class.</p> <p>Bottomline: Make this a clean controller, properly implemented</p>

Hey Christian,

I just wanted to ask what the current status on this issue is. Do you have any open questions, or is there anything we can do to support you solving this issue? You'll find us in the usual Jabber chatroom.

Thanks in advance for a short status!

Greets,
Sebastian

See also Scrum protocol of today. I am mostly working on management view and Bastian supported this by saying that probably Robert wants to have a word in this refactoring...

- File *phoenix_task_8734.patch* added

And here finally a patch for it.

Some notes:

I took the footer from login to make it a bit similar, I would like to pack the footer into some separate file and reuse it in both with fluid but do not know

how that is possible.

I copied the TransparentBackground Stuff from Frontend to backend, so we have a duplicate file now, but as they will be replaced at some point anyway at least we do not mix file references from backend to frontend.

So you need to copy

\Packages\Application\TYPO3\Resources\Public\Frontend\Error\Images\TransparentBackgroundWithRed.png to

\Packages\Application\TYPO3\Resources\Public\Backend\Media\Images\Backgrounds\TransparentBackgroundWithRed.png
