1) Hudson need the jmeter Plugin

<http://wiki.hudson-ci.org/display/HUDSON/JMeter+Plugin>

2) Jmeter need to be downloaded on the server

<http://jakarta.apache.org/jmeter/>

3) Create new build "latest CMS Performance" in Hudson with a build script like this one:

```
<project name="performance" default="build" basedir="..../">
  <target name="build" depends="clean,jmeter" />
  <target name="clean">
    <mkdir dir="${basedir}/build/logs" />
    <delete>
      <fileset dir="${basedir}/build/logs">
        <include name="*.jtl" />
      </fileset>
    </delete>
  </target>
  <target name="jmeter">
    <exec executable="/opt/jmeter/bin/jmeter" dir="${basedir}"
      failonerror="true">
      <arg
        line="-n -t svn/build/testplan.jmx -l build/logs/testplan.jtl -j build/logs/testplan.log" />
    </exec>
  </target>
</project>
```

- Also enable the plugin and specify the path to the result report
