

TYPO3.Flow - Bug # 8968

Status:	Resolved	Priority:	Must have
Author:	Peter Beernink	Category:	Persistence
Created:	2010-07-20	Assigned To:	Karsten Dambekalns
Updated:	2010-10-20	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	SQL errors when using setOrderings() with multiple fields		
Description			
<p>When using setOrderings() with multiple fields, an SQL error is thrown. However, when using only one field, everything works as expected.</p> <p>Example:</p> <pre>\$query = \$this->createQuery(); return \$query ->setOrderings(array('lastname' => \F3\FLOW3\Persistence\QueryInterface::ORDER_ASCENDING, 'firstname' => \F3\FLOW3\Persistence\QueryInterface::ORDER_ASCENDING)) ->execute();</pre> <p>Will throw the following error:</p> <pre>SQLSTATE[HY000]: General error: 1 ambiguous column name: __orderingtable1.parent PDOException thrown in file Packages/Framework/FLOW3/Classes/Persistence/Backend/GenericPdo/Backend.php in line 800.</pre> <p>I've tested this on Alpha 10, with both SQLite and MySQL.</p>
