Subject:	format.numberChoice		

Description

This ViewHelper is a port of Symfony's format_number_choice() helper.

You can use it to render different strings depending on a given number. In the simplest of cases it can be used to have correct singulars and plurals. It also works well with localized strings.

Example:
    <f:format.numberChoice number="42" arguments="{number:42}">[0] no eggs|[1] 1 egg|[2,+Inf] ###number###
    eggs</f:format.numberChoice>

will output
    42 eggs
