- Category changed from I18n to Validation
- Status changed from Accepted to Resolved
- % Done changed from 0 to 100

Changed NumberValidator and DateTimeValidator so they use I18n subpackage and it's functionality. This is how I see them, however I'm not sure about the DateTimeValidator, as it was validating DateTime objects before, and now it's validating date and / or time strings. I'd rather name it the DatetimeValidator (with lower T, as in DatetimeParser and DatetimeFormatter in I18n), but the DateTimeValidator should be removed (is it really needed?) in order to avoid confusing naming.
