

TYPO3.ExtJS - Bug # 9279

Status:	Resolved	Priority:	Should have
Author:	Robert Lemke	Category:	ExtDirect
Created:	2010-08-12	Assigned To:	Robert Lemke
Updated:	2010-10-20	Due date:	
Subject:	Optional arguments are not supported		
Description			
<p>The ProviderViewHelper registers all controller actions which are annotated with @extdirect. For correct handling within ExtJS, the number of arguments for each action must be registered as well.</p> <p>Now the problem is that the ProviderViewHelper just counts the number of arguments of a PHP method and uses this number as an argument count for ExtJS. If, however, an argument is optional and the client side doesn't define that argument, the communication between client and server through ExtDirect fails.</p> <p>The solution, for now, is to just ignore optional arguments.</p>			

Associated revisions

Revision 92b61384 - 2010-08-23 15:49 - Robert Lemke

[~TASK] ExtJS: Added doc comments to a few methods. Added basic parameter check for transaction arguments.

[+BUGFIX] ExtJS (ExtDirect): Fixed a bug which resulted in a broken communication between client and server via ExtDirect if a shared action method had optional arguments. Resolves #9279

[~TASK] FLOW3 (MVC): Cleaned up the code and documentation of the JsonView

[+FEATURE] FLOW3 (Persistence): The base repository now only sets the repository's object type if it has not been defined before. By that it is possible to define a custom object type in the property declaration of a concrete repository.

[+FEATURE] FLOW3 (Property): The property mapper now supports creation and recreation of objects specified by a UUID in an identity array even if they are just part of the overall source object / array to be mapped.

[+BUGFIX] FLOW3 (Validation): Fixed a few failing tests of composite validators, caused by incorrect mock building.
