Complexity:			
Subject:	MVC arguments should be converted to their target type		
Description			
<p>MVC arguments are mapped from the arguments found in the HTTP request (GET / POST ...) to controller argument objects. Because the raw arguments provided by the requests are strings, they currently also end up as strings in the argument objects.</p> <p>We should instead transform the arguments to their declared type if possible. As we already know the designated data type for each argument (from the annotations and type hints) that should be easily possible.</p>

Revision 112feeea - 2010-08-25 16:12 - Robert Lemke

[+FEATURE] FLOW3 (MVC): Convert controller arguments into their declared data type

Controller Arguments are now converted into real integers, floats and booleans if they were declared as such in the type hint or @param annotation.

Empty values are now detected as such and result in NULL as the argument's value.
